PROFESSIONAL EXPERIENCE

Tora Tech

From: 06/2024
To: 12/2026

Product Owner & Backend Developer — Customizable Landing Page Platform

- Acted as the primary point of contact with clients: clarified requirements, managed expectations, and maintained clear communication throughout the project lifecycle.
- Broke down requirements into actionable tasks, assigned workloads, and tracked project progress to ensure on-time delivery.
- Designed and implemented onboarding & training plans to upskill team members, reducing ramp-up time on new projects.
- Developed and customized responsive landing pages on WordPress (PHP, JavaScript, SCSS), ensuring optimal UX across all device sizes.

Technologies: WordPress, PHP, JavaScript, SCSS, Git

Backend Developer — Store Operations Management System (AEON)

- Designed and built the entire database schema to support complex store operations across multiple modules.
- Architected and developed RESTful APIs handling business logic, queue/batch processing, error handling, security controls, and third-party integrations.
- Implemented logging, performance optimization, and monitoring to maintain system stability at scale.
- Wrote unit and integration tests and maintained comprehensive API documentation to support team collaboration.

Technologies: Laravel, ReactJS, MySQL, Docker, RESTful API, Amazon S3, Queue, Git

Developer — Salesforce Marketing Campaign Implementation

- Built sitemap structures for user behavior tracking and analytics, enabling data-driven campaign decisions.
- Developed and customized marketing campaign templates and automation flows to streamline campaign operations.
- Integrated Salesforce Personalization to power product recommendation features, improving user engagement and conversion rates.
- Leveraged MCP during deployment and campaign operations to enhance workflow efficiency.

Technologies: Salesforce Personalization, JavaScript, HTML/CSS, MCP, Git

Backend Developer — Inventory & Business Data Management System (Daido)

- Developed and maintained RESTful APIs following project spec documents, ensuring accurate implementation of business requirements.
- Built file storage and management features using Amazon S3 and Google Drive for scalable document handling.

- Implemented PDF and CSV export functionality to support management reporting and operational workflows.
- Integrated third-party services including Chatwork API, Google APIs, email delivery, and fax printing to support diverse operational needs.
- Wrote unit tests for core features to ensure system reliability and code quality.

Technologies: Java Spring Boot, Vue.js, MySQL, Amazon S3, Google APIs, Chatwork API, RESTful API, Git

---

TECHNICAL SKILLS

Backend: Java Spring Boot, Laravel (PHP), RESTful API, MySQL, Queue/Batch Processing, Unit Test

Frontend: ReactJS, Vue.js, JavaScript, HTML/CSS/SCSS, WordPress

Cloud & Infrastructure: Docker, Amazon S3, Git, Google Drive API

Third-party & Integrations: Google APIs, Chatwork API, Salesforce Personalization, Email Integration, MCP

Soft Skills / Management: Requirement Analysis, Task Management, Client Communication, Team Mentoring, API Documentation

---

LANGUAGES

English: Reading technical documentation; basic conversational communication
Japanese: Basic reading & listening; JLPT N5 level

EDUCATION

FPT University — Da Nang Campus | 2020-2024
Bachelor of Science in Software Engineering
GPA: 3.1
